- $x(-n+3), x(-n-3)$
 (2) compute convolution of $x(n) = \begin{cases} a^n & -1 \leq n \leq 2 \\ 0 & \text{otherwise} \end{cases} \quad a=2$
 $h(n) = 3\delta(n) - \delta(n-1) + 2\delta(n-2)$
 (3) find z-transform of
 $x(n) = (-1)^n \cos(\omega n) + 3\delta(n-2) + e^n$

① $x(n) = \{1, 1, 0.5\}$

(2) $x(n) = \{2^{-1}, \underset{\uparrow}{1}, 2, 4\}$, $h(n) = \{ \underset{\uparrow}{3}, -1, 2 \}$

$$n_{\text{start}} = n_{x_{st}} + n_{y_{st}} = -1 + 0 = -1$$

$$n_{\text{end}} = n_{x_{\text{en}}} + n_{h_{\text{en}}} = 2 + 2 = 4$$

at $n = -1$

$$\text{at } n = -1$$

$$x(n) * h(n) = \sum_{k=-1}^2 x(k) h(n-k)$$

$$= x(-1)h(0) + x(0)h(-1) + x(1)h(-2) + x(2)h(-3) = \frac{1}{2} \times 3 = 1.5$$

at $n=0 \Rightarrow$

$$\begin{aligned}x(n) * h(n) &= \sum_{k=-1}^2 x(k) h(n-k) \\&= x(-1) h(1) + x(0) h(0) + x(1) h(-1) \\&\quad + x(2) h(-2) \\&= \frac{1}{2} \times 1 + 1 \times 3 = 2.5\end{aligned}$$

at $n=1$

$$\begin{aligned}x(n) * h(n) &= \sum_{k=-1}^2 x(k) h(n-k) \\&= x(-1) h(2) + x(0) h(1) + x(1) h(0) \\&= \frac{1}{2} \times 2 + 1 \times 1 + 2 \times 3 = 6\end{aligned}$$

at $n=2$

$$\begin{aligned}x(n) * h(n) &= \sum_{k=-1}^2 x(k) h(n-k) \\&= x(-1) h(3) + x(0) h(2) + x(1) h(1) \\&\quad + x(2) h(0) \\&= 1 \times 2 + 2 \times 1 + 4 \times 3 = 12\end{aligned}$$

at $n=3$

$$\begin{aligned}x(n) * h(n) &= \sum_{k=-1}^2 x(k) h(n-k) \\&= x(-1) h(4) + x(0) h(3) + x(1) h(2) \\&\quad + x(2) h(1) = 2 \times 2 + 4 \times 1 = 0\end{aligned}$$

at $n=4$

$$\begin{aligned}x(n) * h(n) &= \sum_{k=-1}^2 x(k) h(n-k) \\&= x(-1) h(5) + \dots + x(2) h(2) \\&= 4 \times 2 = 8\end{aligned}$$

$$\therefore x(n) * h(n) = \{1.5, 2.5, 6, 12, 0, 8\}$$

\Rightarrow turn over
